

EduTone Xchange™

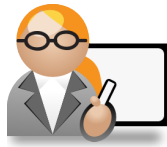

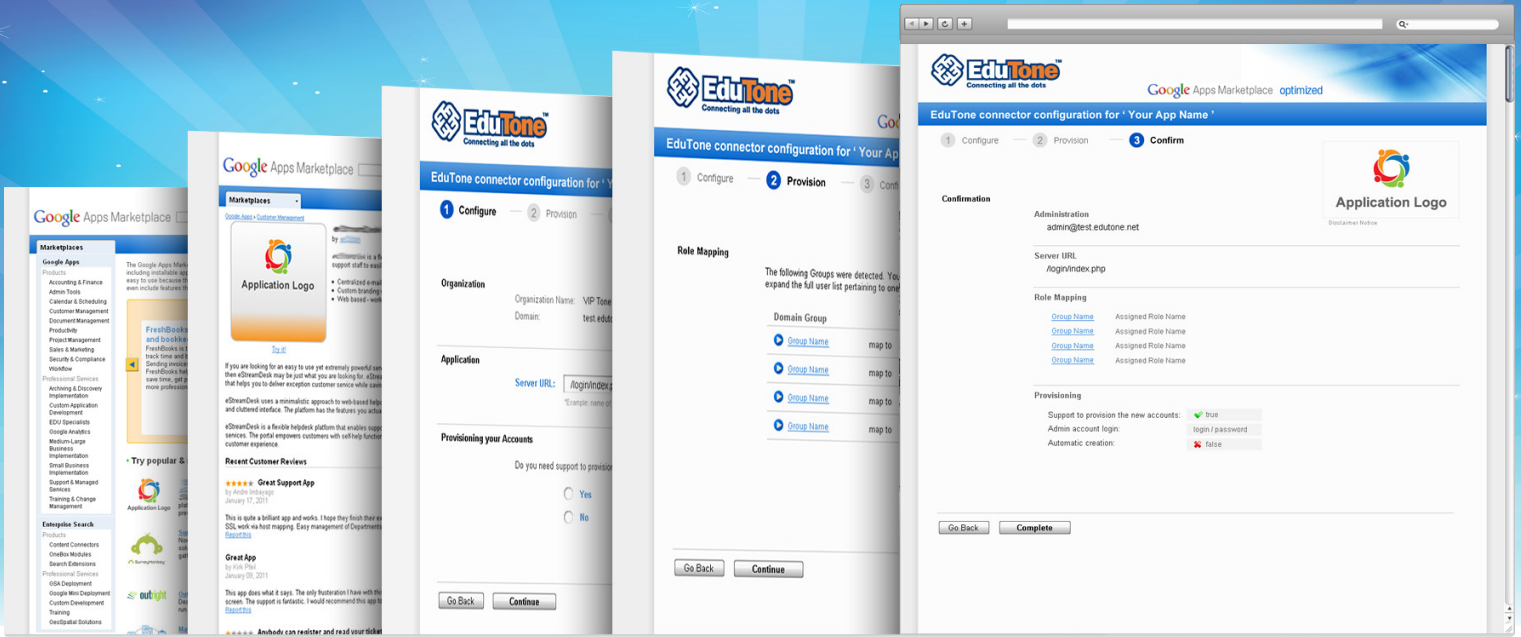

The EduTone Xchange™ for Google Apps Marketplace Edition features a secure identity management system that automates role-based end-user account provisioning and enables single sign-on access across multiple third-party web-based applications from within the Google Apps for Education ecosystem.

In three short steps that take minutes, rather than hours, an organization can deploy an EduTone Connector for an application that takes advantage of Google Apps Organizational Units (OU's) to create role-based access to the appropriate application while maintaining Google Apps for Education as the Launchpad for getting things done!

The EduTone Xchange™ for Google Apps enables organizations to:

- Access all web-based enterprise software applications, digital content and cloud-based services via their Google Apps for Education account
- Synchronize Single Sign-On user access credentials (User ID and Password) with Google Apps for Education
- Automate end-user data integration across multiple applications enabling bulk and real-time service provisioning and delivery
- Improve service levels, service quality, and achieve greater efficiencies within the information technology support structure and potentially creating significant cost savings at the same time

Benefits for Students, Staff, and Parents

- Greater use of school created and purchased resources
- Anytime, anywhere access to resources, applications, information, and services from within Google Apps for Education
- No longer need to remember a login name and password for each service the school provides...just their Google Apps for Education credentials

Benefits for Schools and Education Enterprises

- Remove barriers to adoption by providing simple anytime, anywhere access to resources, applications, and services
- Make better use of scarce technology resources by avoiding the need to create individual user accounts, reset passwords, and manage interoperability
- Rapidly and effectively deploy web-based enterprise applications
